ASBESTOS REMOVAL

PART 1 - GENERAL

1. SCOPE: The work covered by this section includes furnishing all plans, labor, equipment, materials, and transportation necessary for the proper and safe removal, handling, and disposal of non-friable materials.

1.1 Remove asbestos-containing materials to include the following:
7,000 square feet of asbestos containing vapor barrier mastic with associated brick.
(Exterior/NESHAP)

2. TERMINOLOGY

2.1 Abatement - procedures to decrease or eliminate fiber release from precast, spray-on, trowel-applied asbestos-containing building materials. Includes encapsulation, enclosure, and removal.

2.2 Air Monitoring - the process of measuring the fiber content of a specific volume of air during a stated period of time.

2.3 Airlock - system for permitting ingress or egress of personnel without permitting air movement between a contaminated area and an uncontaminated area, typically consisting of two curtained doorways at least three feet apart.

2.4 Amended Water - water to which a surfactant has been added.

2.5 Asbestos - a general term used to describe several fibrous mineral silicates. Although there are many asbestos minerals, only six are of commercial importance. They are: Actinolite, Amosite, Anthophyllite, Chrysotile, Crocidolite, and Tremolite. For the purposes of this Project the term "asbestos" is used interchangeable with "asbestos-containing sprayed material", "dust containing asbestos", and "friable insulating material containing asbestos".

2.9 Clean Room - an uncontaminated area or room which is part of the worker decontamination enclosure system, with provisions for storage of workers' street clothes and protective equipment. Also known as the "Change Room".

2.10 Critical Barrier - seal applied to openings connecting the abatement area with adjacent spaces that will not be included in the containment. Critical barriers shall not be exposed to the gross critical barriers include, but are not limited to: HVAC vents and diffusers ; doorways ; windows ; floor, wall, and ceiling penetrations; and air plenums.

2.11 Curtained Doorway - a device to allow ingress or egress from one room to another while minimizing air movement between the rooms. Typically constructed by placing three overlapping sheets of 6-mil plastic over an existing or temporarily framed doorway, securing each along the top of the doorway, securing the vertical edges of the outer sheets along one vertical edge of the second or middle sheet along the opposite vertical side of the doorway.

2.12 Decontamination Enclosure System - a series of connected rooms, with curtained doorways between any two adjacent rooms, for the decontamination of workers or of materials and equipment. An equipment decontamination system always contains at least three airlocks (rooms).

2.13 Encapsulation - the sealing of asbestos surfaces involving application of a material (encapsulant) that will envelop or coat the fiber matrix and eliminate fiber fallout and protect against contact damage.

16.2.2 Place one layer of six-mil thick polyethylene sheeting on the floor directly beneath the affected areas.

17. REMOVAL OF ASBESTOS-CONTAINING MATERIAL

Remove and properly dispose of all asbestos-containing materials indicated to be removed as described in the procedures outlined in the U.S. Department of Labor Occupational Safety and Health Administration (OSHA) Asbestos Regulations (Code of Federal Regulations Title 29, Part 1926, Section 1926.1101 and as more stringently specified herein.

These waste materials shall be collected in properly labeled 6-mil polyethylene bags or other approved sealed impermeable containers. Double bagging is required. A fine spray of amended water or removal encapsulant shall be used to keep asbestos in the containers damp to minimize airborne asbestos dust.

20.2 Disposal of asbestos waste materials. Waste containers shall be hauled away by the Contractor as soon as there is a sufficient quantity for a dumpster load. Procedures for hauling and disposal shall comply with EPA 40, CFR, Part 61.38, and other applicable state, regional and local Government standards.
